

Eastboard Consoles

PROJECT BRIEF

Midwestern State Wichita Falls TX
BROADCAST ARTS PRODUCTION CENTER

Located in Wichita Falls, TX, Midwestern State University's brand-new Fine Arts building includes a video production studio and control room complex for teaching the broadcast arts; the facility is also used internally, for preparing university media projects. The control room features two RACKBLOCKS consoles: a 9BAY, "L"-shaped front console, including a custom switcher mount, and a 7BAY straight rear console; a rolling 16RU equipment rack is positioned alongside the console. At our client's request, we added a small monitor wall frame to the rear console, supporting a 30" LCD local monitor, with a pair of speakers mounted on rotating platforms attached to pivoting arms.

Thanks to the extrusion-based design of the RACKBLOCKS modular system, new elements such as this monitor wall frame are easily added, and bolt firmly to the console's core frame for secure strength.

These consoles featured black cabinetry, with the worksurfaces covered in lighter (Titanium EV) laminate, which gives this control room a striking, sleek appearance, in keeping with other creative studios and surroundings of the Fine Arts building.
